Introduction

I am a Fullstack Software Engineer with 9+ years of experience designing, developing, and deploying innovative software solutions from scratch. Over multiple projects, I have overseen an increase of 50% of sales, decreased deployment time for projects, and increased customer satisfaction through the introduction of various features and expansions.

SKILLS

- **Engineering:** Product Roadmaps, Frontend & UI, Backend & Infrastructure, Cloud Architecture, API Design & Implementation, RESTful Web Services, Microservices, Software Design & Coding, Testing & Code Coverage, CI/CD, DevOps, Software Quality, Scalability, Performance, Reliability, Automation, Cybersecurity, Code Reviews, Documentation, Web Performance
- **Leadership:** Strategic Planning & Execution, Project Management, Prioritization, Process Improvement, Collaboration
- **Software:**
 - FRONT: Angular 15-21, ECMAScript 6, Node.js, Javascript, Linux, Typescript, React, Riot.js, Java, HTML5, CSS, PHP, SCSS, LESS, Bootstrap, AJAX, Next.js, ADO
 - Back: Java, Node.js, C++, SQL, NoSQL, PostgreSQL, MySQL, MongoDB,
 - Other: XML, JSON, Docker, AWS, Python, Git, GitHub, BitBucket, Redux, AWS, Terraform, Axios, Handlebars, JSX, JEST, Advanced Debugger, Webpack, GUnit, JUnit, Debugging, GraphQL,

EDUCATION & CERTIFICATIONS

- Associate of Science in Computer Programming, Butte Glenn Community College, 2017
- Java Backend Web Development Certification, BloomTech, 2019
- Maestro - Continuing, bachelors.

RELEVANT EXPERIENCE

Fullstack Founding Engineer/Primary Engineer, GuacamoleBox/GuacGaming

12/24 - 6/25

- Developed and configured two Angular-based websites, collaborating with backend engineers to implement endpoints and integrate physical and software systems.
- Created Angular Components to mesh with the UX design
- Crafted Angular services to mesh with the back end.
- Translated UI engineer designs into functional and visually cohesive web pages, ensuring seamless user experience.
- Integrated PayPal and Stripe payment processing (later discontinued) into application infrastructure, optimizing transaction workflows
- Meshed Nest/Node backend to match with other services
- Utilized Typescript to make angular and nest services
- Utilized multiple operating systems to get the program to work.
- Prevented code multiplication and ensured code ran properly
- Released on AWS and GC

Fullstack Developer, Elevance Health via Apex Systems

11/2023 - 3/2024

- Developed a React.JS, Java Spring Boot, and RabbitMQ application for use in Identity Management.
- Handled authentication through Axios and Okta, and developed a pipeline for handling other Identity tasks.
- Released a subject filter with separate parts for database search.
- Full react setup, including router and redux.
- Used spring boot to operate a micro service with 6 parts.

- Used typescript to manage front end
- Debugged to ensure code quality
- Released on AWS

Fullstack Developer, Disney via Capgemini

2/2020 - 4/2023

- Developed and maintained Node.js, React.js, Java, Spring, SpringBoot, and Angular applications for external companies.
- Managed and ensured the smooth operations of React applications, a PHP website, and ServiceNow platforms.
- Improved the performance and stability of business-critical applications by updating and maintaining backend services.
- Streamlined ticket generation, reduced duplicate tickets by 75%, expedited product development, and increased overall operational efficiency by creating a ServiceNow plugin system with proprietary Angular plugins.
- Identified, diagnosed, and resolved P0 backend issues within 48 hours to stop false charges and duplicate reservations.
- Basically every front end language you can think of, I did here. While I did do a lot of angular here, Disney uses every major front end framework that I'm aware of, as well as PHP. I used Angular, PHP and VUE here on different projects, including the above mentioned ServiceNow plugin (Angular), an unannounced project (php), and a lot of random back end projects involving their various back end support (Java and PHP).
- Utilized EC2 (AWS) containers to deploy.
- Used AWS DynamoDB to manage changes, as well as other databases.
- Used beanstalk and terraform to perform releases.
- Used typescript to manage front end projects
- Utilized Linux Docker Containers to run projects
- Worked with ServiceNow to handle tasks
- Utilized AWS throughout, from DynamoDB and S3, to lambda functions to Amazon Messaging Service and EC2

Fullstack engineer/Web Developer, Sundance Art Glass

8/2017 - 11/2018

- Increased sales by 25% by building and deploying Riot.js web applications for soft and hard glass sales, streamlining buyer flows, improving the customer experience, and transitioning how hard glass was sold to shrink the size and validate sales.
- Led the development of a mobile version of the website using Bootstrap, Riot, and a PHP backend to drive sales.
- Improved load times and reduced errors on the desktop application by 10% by cleaning the code and fixing bugs.
- Managed all IT operations, including hardware, software, and networking support, updates, and modifications.
- Ensured the accuracy and integrity of the database by maintaining up-to-date info on glass, kilns, and heating products.
- Ran Linux and scripts to handle my work
- Worked with ServiceNow to handle tasks
- Utilized Node.js

Fullstack Contractor, Butte Glenn Community College

8/2015 - 5/2017

- Led a team designing and developing a C++/Qt-based application to link student, hospital, and appointment SQL databases.
- Developed and deployed a Meteor.js, Node.js, and Express.js application to streamline hospital assignments and optimize staff training programs.
- System ran on Linux
- Utilized Linux scripting to help with my functionality
- Built a Riot.js web application to enable external clients to accurately calculate and price contract work and RFPs.
- Served as a technical mentor for undergraduate computer science students and increased tutored student grades by 25%.
